

2016 Year in Review

Austria

2016 saw many projects and contracts we had long been preparing in Austria really take off:

- We now have vans operating in Austria's largest cities: Vienna, Graz, Klagenfurt and Linz;
- We have long term contracts with major customers including Gebruder Weiss/DPD, Schachinger/DPD, and DB Schenker;
- Based on these successes we are in discussion with numerous other interested prospects;
- We are leading participants in LEEFF (Low Emission Electric Freight Fleets), a EUR 5 Mio. project and the largest electric mobility project in Austria. Other partners are Schachinger/DPD, Smatrics/Verbund, Spar, Quehenberger, and Kreisel.

Netherlands

Voltia Benelux opened its doors in May 2016 and in that time we have:

- Debuted our service at the [Fleetmanagement](#) event in Rotterdam;
- Established an office at the clean tech hub in The Hague;
- Become very visible and made a lot of progress breaking into the new <3.5 ton commercial market;
- Introduced the Maxi in October at the [Ecomobiel](#) trade show in Den Bosch and already have two vehicles being tested by prospective Dutch clients;
- Grown our team to three full time employees;
- Joined the [Green Deal 6](#) zero emissions city logistics network, helping us to meet and partner with other companies working in green logistics. The network and our office space are proving excellent ways to meet new clients and likeminded companies.

Slovakia

2016 was a year of continuing growth for Voltia in Slovakia:

- In April we began our cooperation with the Slovak Postal Service. They are now using 4 electric vans and our service in their operations around Slovakia. Thus far, they have driven around 60,000 emissions free kilometers;
- Other clients using our service in the region have driven around 140,000 more kilometers this year;
- The CEE launch of the Maxi took place at the Slovakia Logistics Conference [SlovLog](#) in November to great acclaim. The vehicle is now being tested by a number of potential clients;
- We have a lengthy list of parties interested in trying our service with the Maxi and we are looking forward to 2017 to address that demand.
