DPD becomes first company to deploy the Voltia eNV200 Maxi in Slovakia
Custom built zero emission vehicle helps DPD to achieve its sustainable development goals

Bratislava – DPD Slovakia has begun using two all-electric, zero emission Voltia Maxi's, becoming the first company in Slovakia to deploy the custom made urban delivery vehicle. DPD follows PostNL in the Netherlands in being among the first companies in Europe deploying the vehicle. This move is one of the steps in DPD's efforts to reduce its carbon footprint and achieve its sustainable development goals.

The vehicles will be used to serve DPD clients in Bratislava, reducing the company's carbon footprint there. DPD plans to add more Maxi's to its fleet before the end of the year.

A short video of the Maxi in service is here: <https://youtu.be/ZNipVIbmLgA>

"Our goal is to help companies switch to electric quickly, smoothly, and without disruption," said Juraj Ulehla, managing partner of Voltia. "We designed the Maxi to be the ideal tool for companies looking for zero emission urban delivery options. We could not be prouder that a premier company like DPD has the honor of being the first company to deploy them in our home market of Slovakia. This is just the beginning."

"DPD cares about the environment in which we serve our customers. We are also a company which is first to bring innovations in delivery services to the Slovak market. That is why we decided to be the first delivery company in Slovakia to deploy these custom made electric vans for parcel delivery in Bratislava, where the concentration of standard automobile transport and resulting carbon is very high," said Peter Pavúk, CEO of DPD in Slovakia.

The Voltia eNV200 Maxi is a custom modified all-electric vehicle built on the base of the Nissan eNV200. The cargo bay can hold 8m³ of cargo, up to 600 kg, and has a range of up to 140 km per charge.

Voltia helps delivery and logistics companies switch their fleets to electric. Through its eFleet Advisory, Voltia analyzes a company's operations and provides a customized plan for how to switch their fleet to electric in a way that maximizes the benefits of electric and minimizes transition challenges. Voltia also offers custom electric vehicles to fill in gaps it sees in the market – the Maxi is one such custom vehicle.
