## Voltia Launches the Maxi, Custom Designed Zero Emission Urban Delivery Van *With 2x more cargo space Maxi reduces trips, combatting air pollution and climate change*

Den Bosch, NL – Today, for the first time ever, to a crowd of thousands at the Ecomobiel sustainable mobility trade show, electric mobility company Voltia will officially unveil its latest product, the Maxi. The Maxi is a revolutionary new all electric 2,2 ton urban delivery van designed to make it possible to deliver more goods with fewer trips and zero emissions.

The new vehicle will form part of Voltia's pioneering commercial electric vehicle as-a-service business model. Voltia provides customers with analysis of their routes, advising, an electric vehicle deployment plan, the best commercial electric vehicles available, and a complete service package tailored to their specific business needs. Voltia retains ownership of the vans and leases them to clients as part of the service, thereby overcoming the largest barrier to electric vehicle deployment, namely their high purchase price.

“The transport sector is a significant source of urban CO2 emissions, and, with the rise of e-commerce, the challenge is growing,” said Voltia Benelux Regional Manager Manolo de la Fuente. “According to the research firm CE Delft, 30% of the Netherland's transport related emissions comes from city logistics. We are pleased today to introduce the Maxi, to tackle those problems by providing delivery companies a new, customized tool they can realistically use to achieve their business goals in a sustainable manner.”

The Maxi is an evolution of the Nissan eNV200, engineered for maximum cargo space and operating in an urban environment. It features an extended rear chassis and a cabin capable of holding three Euro pallets, 600 kg and 8 cubic meters of cargo (double competitors in its class). It can drive up to 140 kilometers on a single charge. Thanks to a very reasonable price, interest in the Maxi has been very high since it was initially announced and it has undergone rigorous testing and refinement.

The Maxi will premiere at logistics sector events in each of Voltia's operational regions (Benelux, DACH, and Central and Eastern Europe) during October and November, where it can be seen and tested:

[Ecomobiel](#), Den Bosch, NL - Oct 4  
[Niederösterreichisches Logistik Tag](#), Vienna, AT - Oct 6  
[Schumbeta Forum](#), Vienna, AT - Oct 21  
[Future City Logistics 4.0](#), Vienna, AT - Oct 29  
[Speedchain](#), Prague, CZ - Nov 3-4  
[SlovLog](#), Bratislava, SK - Nov 24

(This list is subject to change. To confirm the Maxi's presence please contact [aaron.fishbone@voltia.com](mailto:aaron.fishbone@voltia.com))

###

Voltia is the flagship company of the Voltia Group, an international consortium of companies motivated by the desire to end our dependence on oil and provide cleaner mobility solutions for people and business. With its pioneering electric vehicle as-a-service model Voltia provides expert advising and customized deployment of electric vehicles into logistics and delivery fleets in a smooth, cost effective, and risk free manner, helping companies overcome the largest barriers to fleet electrification.
